

Press Release

[RPMGlobal release new version of the world's fastest growing Asset Management solution, AMT](#)

(BRISBANE, November 2, 2018)

RPMGlobal (RPM) has today announced the release of AMT 8.16 – the world's fastest growing asset management solution. Since AMT's acquisition by RPMGlobal in 2016 the solution has been deployed on every continent other than Antarctica.

AMT 8.16 has a large focus on mobility, an area that the industry is utilising more and more and until now have been *"making do"* with what is available. Commenting on the release, Mr. Michael Baldwin, Executive General Manager of Product Strategy said "Mobility is critical to ensuring that information is in the hands of the right people as it is needed. One thing we have found in recent years is that giving people information with context amplifies their decision-making capabilities and there is no better way than to have it in their hands in the field when they need it."

AMT has the Dynamic Life Cycle Costing engine, and inbuilt intelligence that no other system contains, and the mobile app is completely integrated into this engine. This means that reliability and life cycle costing are linked, enabling users to not just identify or predict maintenance issues, but understand their impact and accurately model the correct resolution.

In this release of AMT, RPM has streamlined the inspection work process in the AMT mobile app making it far easier to manage in the field. With a mobile device, users can access, edit and close work orders in the field. Work can be created automatically from strategy tasks within AMT or an integrated ERP. This process becomes a seamless execution of inspection and checklist work for the mobile user. This improves usability and productivity with an easy and practical process for the user.

"Our aim with AMT mobile is to ensure that the end users have an easy way to perform their job. Their focus should be on completing the task at hand, not working out how they will enter it into a system at some point in the future," said Mr Baldwin.

While the focus of this release was on mobility, there are also several improvements and enhancements to usability and budgeting in addition to support for SQL Server 2016 platform. Through RPMGlobal's online support portal and forums, users are continuously providing feedback that can improve the product and features they would like added. With each release of software these key features are developed and then ready to use as software is upgraded.

"AMT has formed a critical part of our business and with every release more and more integration throughout the suite is added," said Mr Baldwin. AMT 8.16 also provides tighter integration to products like MinVu which is capturing real time data from operational systems such as FMS and health systems in the field. Information like machine hours and health sensor information is critical to an asset management system, and that is completely automated within the RPM offering.

Mr Baldwin concluded by stating "As mining moves towards a digital and then intelligent world, automation of data capture, validation and transfer is crucial. Once that part is automated your people can focus on what they need to do to improve rather than entering and manipulating data between systems."

To learn more about the enhancements made in AMT 8.16 or to book in for a demonstration, contact your local RPMGlobal office.
