

Press Release

RPMGlobal enter into Master Software Subscription Agreement to extend the reach of RPM's software to the Accenture Connected Mine Solution

June 2018

RPMGlobal Holdings Limited (ASX: RUL) [RPM] has entered into a master software subscription license and services agreement with Proquire LLC, an Accenture affiliate.

This agreement will see RPM's software products offered as part of Accenture's Connected Mine suite on a subscription basis through Accenture.

The Connected Mine solution, built by Accenture merges mobile, cloud and analytics to enable mining companies to manage their in-pit operations more efficiently. RPMGlobal extends this capability by providing integrated mine planning capabilities as part of the Connected Mine solutions which increases visibility, productivity and efficiency across the mining value chain.

To reach the level of cross-functional communication the modern environment demands, the Connected Mine utilises the best digital technology and Internet of Things cloud with on-premise platforms. By breaking down rigid data siloes, the Connected Mine ensures that the right information is reaching the right decision makers.

RPM's CEO and Managing Director Richard Mathews said "RPM is pleased to be working with Accenture - a recognised global leader in digital transformation and for the potential for RPM's products to be made available to the mining industry through the Accenture Connected Mine Offering. Working together, Accenture and RPM can bring mine engineering insight together with operational acumen into one central system for analysis and decision making."

A number of early adopters have already shown interest in this collaboration with particular excitement being generated around RPMGlobal's short term planning solution, XECUTE. By integrating XECUTE into the Connected Mine, users who are executing the mines operational plans can monitor real time data and analyse operational performance within the mine.

Mr Mathews concluded by stating that, "This insight will facilitate the ability for end users to predict end of period outcomes so they can adjust their plans mid shift if needed. If a change is warranted the system will distribute the new plan to the team in the mine in real time. The system will also monitor activity in the mine and will alert the user to potential safety risks."

By shifting away from outdated data siloes and investing in the Connected Mine, the mining industry has the potential to achieve unparalleled levels of productivity, safety and efficiency. To understand how this can be implemented at your mine site, contact your local RPMGlobal office.
