

RPMGLOBAL

RPM TRAINING

RPMGlobal has been the go-to provider of professional development and software training for the mining industry for more than 40 years. Our trainer's talk-the-talk of mining to deliver the most comprehensive suite of learning outcomes for participants.

Our approach to learning is through discussion, practical workshops and real-life case studies.

- Over 14,000 people have attended one or more of RPMGlobal's training courses.
- Training is delivered anywhere, anytime by experienced mining professionals.
- Maximise the investment in RPMGlobal's Software by ensuring end-users are trained and continually refreshed in effective use of the solutions.

RPMGlobal offers training through different methods to suit our client's needs:

**Customer-Specific
Training**

Customised Training

provides customer-specific training for companies either onsite or in our offices.

Classroom

Public Classroom Training

is scheduled at RPMGlobal's international offices throughout the year, making it accessible for individuals to improve their skills and complete required professional development hours.

eLearning

Online Training

delivery is available in some of our courses, providing participants with the flexibility to complete when convenient.

Implementation Done Differently

RPMGlobal combines its deep domain experience and content to ensure end-users understand best practice approaches to planning, as well as effective use of the deployed software. Participants can choose to receive the training directly from the implementation team in a classroom style format, or where available, through RPMGlobal's Online Learning Platform (or a combination of the two).

Training

Mining for Non-Miners

[These courses](#) are designed for those with a non-mining background, providing students with a comprehensive understanding of the cycle of mining.

Offerings include:

- [Coal & Metals](#)
- [Coal](#)
- [Metals](#)
- [Oil Sands](#)

Mining for Non-Miners is also available as an [Online course](#). Access to the course is provided for twelve months and can be purchased directly from the [RPM Online Store](#).

Mining Economics

[This course](#) equips students with an understanding of the best practice approach to financial modelling and systematic decision-making based on costs.

Mine Planning

Students gain a comprehensive understanding of efficient and cost-effective planning approaches associated with common mining systems.

Mine Planning courses include:
