New Enterprise Software Product – XERAS for Enterprise™

30 May 2013

RungePincockMinarco Limited (ASX: RUL) [RPM] has today launched the first fully integrated Enterprise Financial Modelling (EFM) software application specifically built for the mining industry, XERAS for Enterprise™.

XERAS for Enterprise represents the first of RPM's technology products to take the strategic step forward into the enterprise environment. XERAS for Enterprise follows closely behind the successful launch of RPM's enterprise enabled XERAS™ 8.0 last week, which is used by major mining companies all over the world.

Launched with the support of global ERP powerhouse SAP AG (SAP), XERAS for Enterprise seamlessly integrates SAP's Financial and Maintenance Management modules with the financial modelling capabilities of XERAS. This integration allows for unprecedented levels of financial visibility and cost control, from individual mine sites through to corporate management reporting systems.

RPM's Chief Executive Officer Richard Mathews commenting on the release said, "The focus of the industry has clearly shifted to driving productivity improvements. Across our global client base we are seeing a growing demand from Boards and senior management for increased visibility, control and predictability of capital and operating cost structures. The ability to explain the difference between actual and planned financial results and to predict the financial implications of changes in the mining environment is of critical importance to our customers. We've listened to what our customers have been telling us and specifically asking for. They wanted us to take the visibility they get at an operational level from our market leading XERAS product and extend it across the Enterprise and we have done that with SAP. This product has been a long time in the making and we are thrilled to bring it to market now."

"Our relationship with SAP makes perfect sense given our almost identical customer base in the industry. Never before has a complex mining company had the ability to see the immediate financial impacts of change in an operational mine plan reflected in real time in a corporate budgeting and reforecasting systems."

With a centralised platform for conducting analysis and generating different scenarios using auditable and validated information, XERAS for Enterprise bridges the gap between the mine and the boardroom.
