## New Product – Open Pit Diamonds XPAC Solution (OPDS)

28 May 2014

RungePincockMinarco Limited (ASX: RUL) [RPM] has today launched Open Pit Diamonds XPAC Solution (OPDS)™ a Commodity Based Solution focused on scheduling open pit diamond mines.

Following on from the release a fortnight ago by RPM of its Oil Sands XPAC Solution (OSS)™, OPDS is a commercial-off-the-shelf product that is configurable to the specific requirements of diamond mines. This product like the other Commodity Based Solutions uses a standard, process driven interface to make planning activities much easier to master and more cost effective to maintain.

Richard Mathews RPM's CEO and MD said "We really are starting to get the synergies out of a flexible workflow platform which can be standardised based on mining method and operational process flow. The really nice benefit of this approach is that as we add new underlying functionality to any of our Commodity Based Solutions all of them get that functionality."

"The mantra of Standardisation, Simplification and Commercial-Off-The-Shelf is really resonating with our customers and prospects. The streamlining of the entire mine scheduling process from geology to scheduling, haulage and product optimisation built on RPM's industry leading scheduling solution, XPAC in a script free environment is a game changer".

Consistent with RPM's enterprise software strategy, OPDS also integrates directly with XERAS for Enterprise®, RPM's enterprise financial modelling solution.

The launch of OPDS follows the release earlier this month of RPM's Oil Sands Solution and the releases in 2013 of RPM's Open Pit Metals, Open Cut Coal and Underground Coal commodity mining solutions.
