

## Announcement

### New Product – XERAS Enterprise

30 October 2015

RungePincockMinarco Limited (ASX: RUL) [RPM] has today announced the release of XERAS Enterprise™ its new enterprise financial modelling software product which has a revolutionary new user interface (UI) and the power and flexibility of a server based architecture.

This latest software offering from RPM, the leaders in mining financial modelling, brings with it a whole new user engagement experience. Inspired by the gaming industry the UI is streamlined, user focused and delivers financial information in an interactive new way.

Speaking today at the SAP Mining Industry Advisory Council Partner Day, RPM's CEO and Managing Director Richard Mathews said, "XERAS Enterprise has been built from the ground up, but incorporates our 35 years of experience in financial modelling for mining. The whole user experience is incredibly different from what our clients, and indeed the industry has ever seen before."

"To put it simply, the user interface is really cool. We put a lot of effort into exploring the users' needs, making it more intuitive, easier to navigate, completely transparent and much more visual with one click graphs and charts, and much much faster. XERAS Enterprise provides the next level of visibility, consistency and control in budgeting and reforecasting for our clients."

"Using a central enterprise planning framework, XERAS Enterprise has seamless integration with SAP and other ERP systems. From the power of the corporate master data module, to a sophisticated model repository for the management of data, RPM's Enterprise Planning Framework allows clients to store, manage and control their budgeting and reforecasting processes better than ever before. The seamless transfer of data between the ERP and the budgeting/forecasting models ensures that there is a single source of the truth delivering greater confidence in every budget or reforecast produced."

"RPM has really pioneered the use of enterprise financial modelling for mining, from zero based budgeting to plan vs. actual reporting, we are delivering consistency, reliability and certainty to the guys in charge of some very big numbers within our clients. XERAS Enterprise is the next step in this journey, it's now easier to use and even faster than before. There is no need to be grappling with hundreds of divergent spread sheets anymore, one system fully integrated produces the best results."

"This product isn't solely targeted at the big end of town, through different use modes XERAS Enterprise will suit the smaller miners also. Whether you need to manage a maintenance budget at a single site, consolidate forecasts across a couple of operations or take it all the way across an entire multi-site mining business and connect with your ERP then XERAS Enterprise has an option that will suit."

"While Enterprise Systems are critical to large operations we understand that it isn't necessary for all clients, but they do all need a robust budgeting system that delivers accurate and transparent outcomes. XERAS Enterprise can ensure this for any scale operation. Early feedback on this new product has been overwhelmingly positive, and we are certainly keen to see many of our clients start reaping the benefits of using a new and exciting server based, integrated, financial modelling product" concluded Mr Mathews.

The complete XERAS Enterprise solution and ERP integration is available today, and live demonstrations can be organised through any RPM office.
