

Downer achieves Asset Management Excellence with AMT

"RPMGlobal understands the mining equipment business well and this translates into a great product to manage our assets."

Danny Boyling
Executive GM Plan

Overview

Downer is Australia's leading diversified mining contractor with around 4,000 employees working across more than 50 sites in Australia, Papua New Guinea, South America and South Africa.

Why AMT?

As an asset intensive business, Downer needed a best-of-breed asset management system. They also needed a partner, who understands the mining industry, to tailor the system to handle complex asset accounting requirements and integrate with legacy finance systems.

AMT, developed specifically for managing mining and construction assets, was a perfect fit for Downer's requirements. RPMGlobal, with a background in providing asset management consulting services to mining and earthmoving companies, was able to provide necessary business support during AMT implementation and training.

The combination of a system focused on mining and construction assets, as well as a services team who understood Downer's mining business, was important for the successful rollout of AMT to 21 mine sites in under 6 months.

Key Points

- Asset management package designed specifically for mining equipment
- Able to handle complex asset accounting requirements
- A system partner who understood tight integration with legacy systems
